

# antihemorroidal cinfa

---

**Composition per gram:**

Hydrocortisone acetate .....	25 mg
Neomycin (sulphate) .....	3.5 mg
Benzocaine .....	15 mg
Tannic acid .....	10 mg

Excipients: buthyl parahydroxybenzoate, 1.7 mg; methyl parahydroxybenzoate, 0.2 mg; cholesterol, 4.8 mg; microcrystalline wax, 38.8 mg; hard paraffin, 710.5 mg; liquid paraffin, 189.0 mg.

The association of hydrocortisone (a corticosteroid ingredient with a topic anti-inflammatory and anti-allergic action), neomycin (a wide spectrum antibiotic), tannic acid (an astringent, haemostatic agent) and benzocaine (an anesthetic, anti-itching) makes an efficient formula for the symptomatic treatment of the troubles caused by hemorrhoids.

---

**Indications:**

External and internal hemorrhoids, fissures, fistulas, ulcers, anal itching, etc.

---
